LABORATORY REPORT: C2FR09305-1

Armstrong Forensic Laboratory, Inc. (Armstrong) received one sample on June 23, 2022, for laboratory evaluation. Armstrong was requested to analyze the sample for controlled substances. The sample is described in the table below.

Sample Descriptions:

Laboratory ID	Client ID	Client Description	Container/Laboratory Description
C2-09305A-001A	1	Oxycodone - Narc Gone Sample	Plastic bottle containing black slurry

Methods of Analyses:

Evaluations for drugs of abuse are done by High Resolution Capillary Column Gas Chromatography/Mass Spectrometry (GC/MS) and Attenuated Total Reflectance-Fourier Transform Infrared Spectroscopy (ATR-FTIR) against a defined target analyte list (TAL). The analyses may detect other compounds of interest; these compounds will be reported. This combination of analytical techniques will detect and identify a broad range of drugs of abuse. They will not, however, detect all controlled substances.

Data Analysis and Interpretations:

- C2-09305A-001A consists of a plastic bottle containing a slurry of a granular black solid in liquid. The liquid portion of the sample was analyzed. Analysis by ATR-FTIR identifies the liquid as primarily water. The liquid is acidic with a pH in the range of 1 to 2. A portion of the liquid was extracted for analysis by GC/MS. The analytical data establish no detectable oxycodone or other controlled substances. For reference, the lower limit of quantitation for the compounds in the target analyte list, which includes oxycodone, is 37 milligrams per kilogram (mg/kg), or 0.0037%.

Report No: C2FR09305-1 Page 3 of 3

Results and Conclusions:

C2-09305A-001A contains no detectable oxycodone. No drugs or controlled substances are identified in the analyses performed.

Evidence Disposition:

Evidence has been placed into secure storage at Armstrong Forensic Laboratory, Inc., for final disposition in accordance with Client's instructions.

Armstrong Forensic Laboratory, Inc. (Armstrong) is accredited through ANAB and the Texas Forensic Science Commission for criminal casework in the disciplines of Controlled Substances; Toxicology in the category of Blood Alcohol; and Trace Evidence in the categories of Fibers & Textiles, Fire Debris, and General Physical & Chemical Analysis. Unless noted otherwise, all work performed on this case was in accordance with these requirements and Armstrong's standard operating procedures. This report shall not be reproduced, except in full, without the written permission of Armstrong Forensic Laboratory.
